

DGF OCEAN **SECURE**

Improving reliability on global supply chains
Saragossa, October, 25th

DHL Global Forwarding – Ocean Freight

GLOBAL FORWARDING / FREIGHT		SUPPLY CHAIN	EXPRESS
Intercontinental Transportation	Europe-wide Transportation	Contract Logistics & Industry Solutions	Time-definite International Shipments

Air Freight

DHL OCEAN FREIGHT key facts

OCEAN FREIGHT

Multimodal

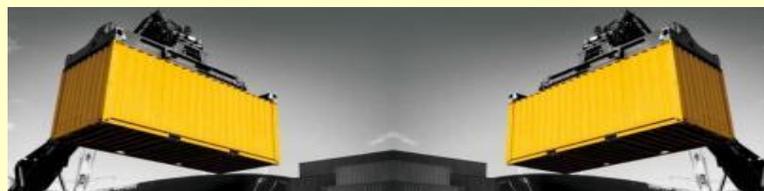

International SCM

Industrial Projects

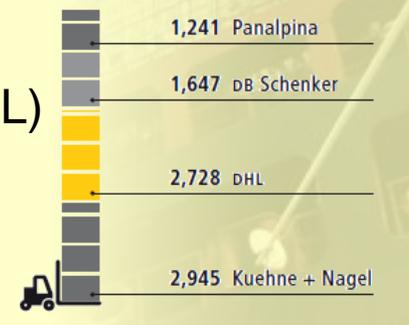

Customs Brokerage

Lead Logistics Provider

- over 4,000 professionals
- over 330 sites worldwide
- over 2.7 Mio TEU per year (FCL)
- over 45,000 weekly point pairs (LCL)

Ocean freight market, 2010: top 4
thousand TEU

Source: DPDHL annual report 2011

What is Ocean Secure?

Enabling of enhanced ocean freight services to create more transparency for increased customer satisfaction

Container security devices

acquire data at the container

External sources

Receive data through suppliers

Communication networks

transmit data to remote users

Online portals

manage situations & shipments

Container Security Devices (CSD)

Physical data monitoring

Online Portal

Generate visibility combined with external sources in one tool

AIS, Terminal provider, trucker, port authorities, carrier, etc)

In-transit visibility

Monitoring of mission critical parameters and notification of remote users in case of exception

In-transit intervention

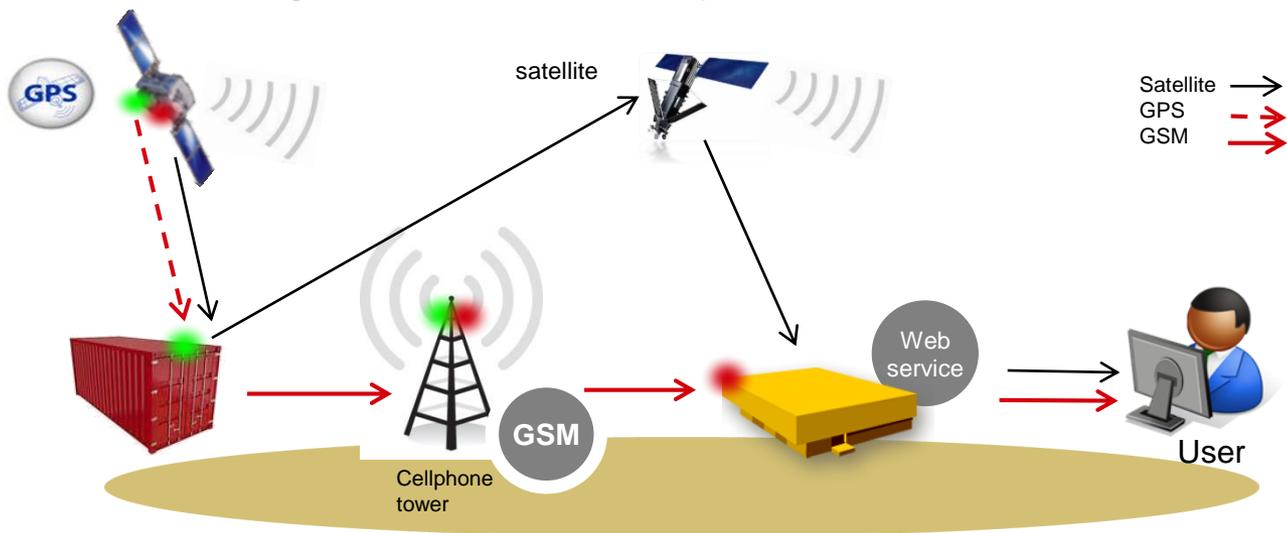

Execution of corrective or remedial action protocols prompted by in-transit alarms

Standard operations

Setup of improved processes through insights into door-to-door container conditions

Information transfer

Transmitting container data by satellite and/or GSM

	Satellite	GSM-GPS	GSM
Communication transfer by	Satellite	Mobile communications network (GSM)	Mobile communications network (GSM)
Navigation	Position obtained by signals of GPS	Position obtained by signals of GPS	From location of one or several cell phone towers

GPS= Global Positioning System; requires a direct line of sight from the container to several satellites for cross-referencing.

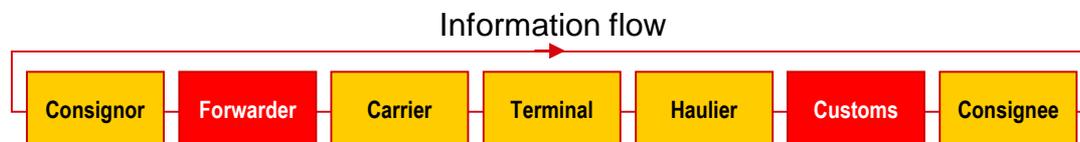

GSM= Global System for Mobil Communications; less accurate than GPS but orientation on the approximate whereabouts of a container.

DGF view on Cassandra

Forwarders orchestrate the many actors and processes along door-to-door supply chains.

Utmost importance to collect shipment information from original source to avoid duplications of work

Increasing importance of good functional information flow between business and authorities to improve efficiency

Consolidation of existing business information and releasing it in good quality at the right time to the right person in charge is the key to satisfy our customers

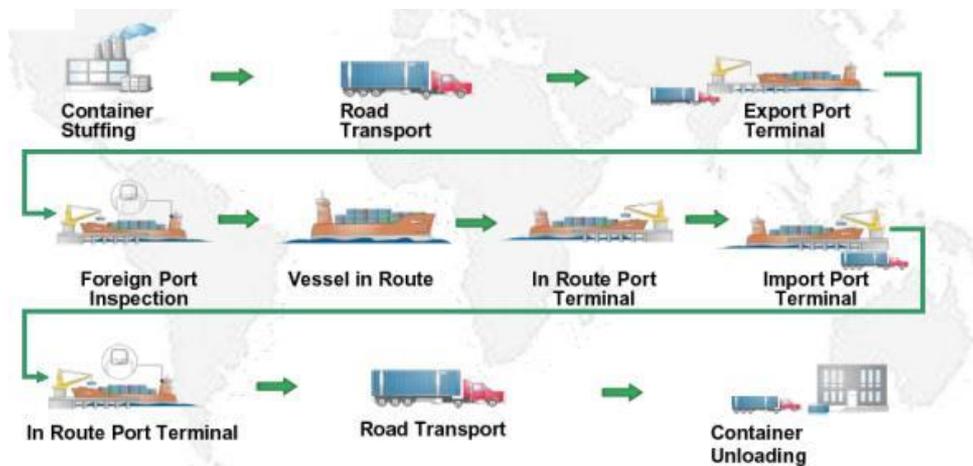

Continuous development of supply chain processes, especially in terms of customs regulations is absolutely essential to decrease vulnerability and improve reliability

Goals

Conclusive and controlled flow of original data is leading to faster and more reliable clearance of containerized ocean freight.

Continuously harmonized processes guarantee an improved performance of all involved parties

Aim is a **reduction** of

Port congestions
Transit time
Costs

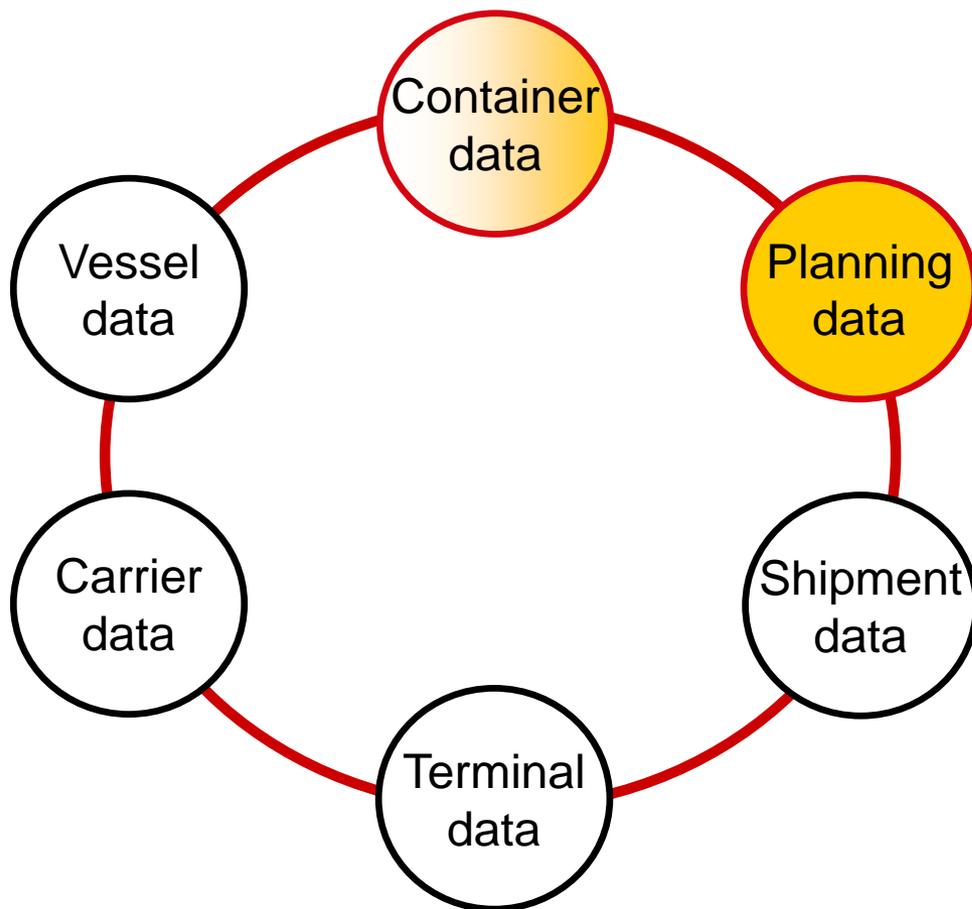

and **improvement** of

Reliability
Performance
Visibility

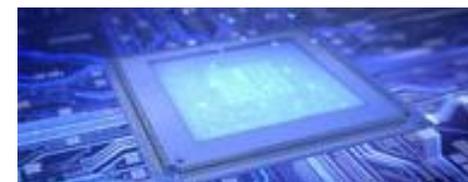

With nearly 3 million shipped containers in all kind of verticals and all trades globally, there's lots of valuable expertise to share with authorities to enhance processes

From Business Data to Business Intelligence

Information from container devices and other sources need to be bundled and processed to translate raw information into situational awareness.

Life Sciences and Health

Technology and Electronics

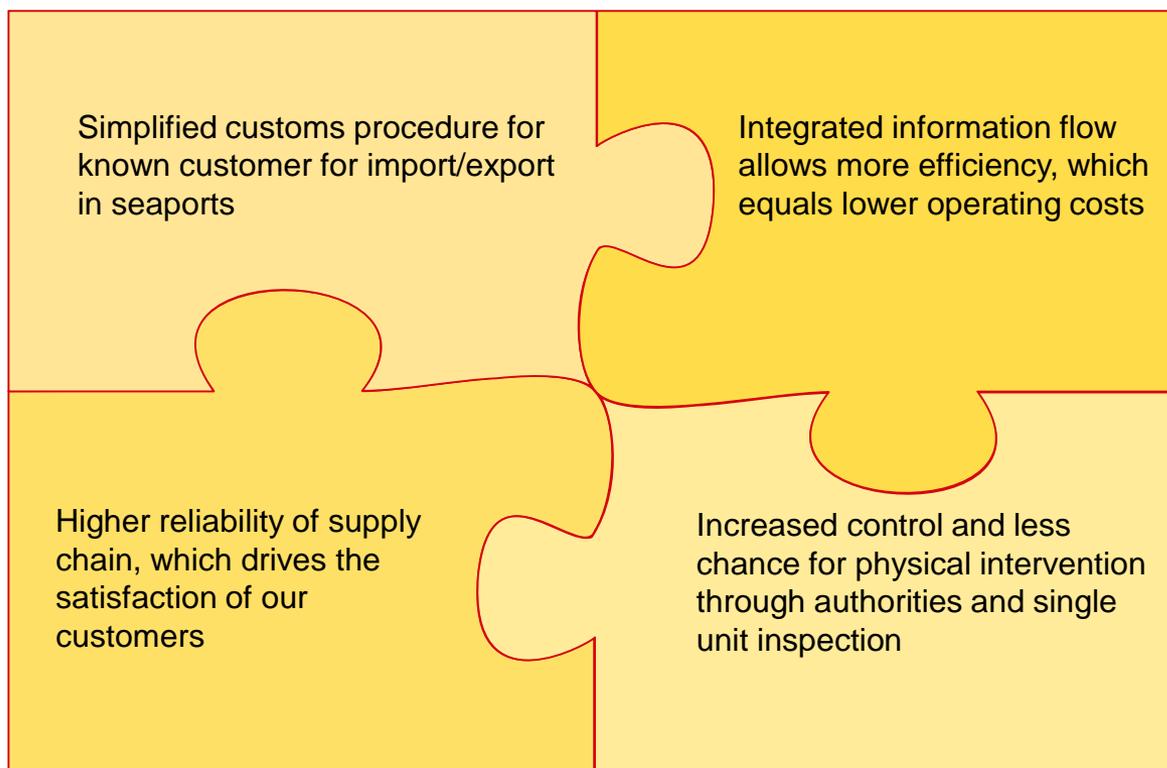

Automotive

Government and Defense

Benefits

Optimized digital data flow will reduce transaction costs and increase quality for shipper, freight forwarder and authorities

Your questions?

Experiences during this project

- Freight forwarder have the data sets available but not consolidated nor analyzed
- Data sharing is a critical topic – and makes it difficult to find trial customers
- Very interesting to cross the silos and learn the different interests of involved parties
- It will take more time to enroll a full scale product based on data sharing – but we are making good progress
- Data consolidation concepts, process maps & data standardization guidelines are the easy part – the devil is in the details
